PROFESSIONAL SUMMARY

Aspiring Data Science & AI Engineer with a hands-on project portfolio spanning fraud detection, churn prediction, data pipelines, and GenAI applications. Proficient in Python, Scikit-learn, XGBoost, LangChain, and OpenAI API. Passionate about building ML solutions that deliver measurable business impact. Seeking entry-level roles in Data Science, Machine Learning, and Generative AI.

TECHNICAL SKILLS

Languages	Python, SQL
ML / AI	Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn, Plotly, Random Forest, XGBoost, Logistic Regression, SMOTE, Anomaly Detection
GenAI / LLM	LangChain, OpenAI API, HuggingFace Transformers, Prompt Engineering, RAG, Streamlit
BI & Scraping	Power BI, Tableau, Excel (Advanced), Power Query, BeautifulSoup, Selenium
Dev Tools	Git, GitHub, Jupyter Notebook, VS Code, Google Colab
Competencies	Feature Engineering, EDA, Model Evaluation (AUC/ROC/F1), Imbalanced Data (SMOTE), Data Wrangling, ETL Pipelines

PROJECTS

FraudGuard Mobile Transaction Fraud Detection	Completed
<i>Tech Stack: Python XGBoost Scikit-learn SMOTE Pandas Seaborn</i> - Built an end-to-end fraud detection pipeline on imbalanced mobile transaction data; applied SMOTE to address class imbalance, achieving AUC 0.97+ and F1-score 0.92 on the fraud class. - Engineered transaction velocity, amount deviation, and time-of-day features; delivered ROC curve and feature importance charts to communicate risk drivers to stakeholders.	
BankShield Bank Account Fraud Detection	Completed
<i>Tech Stack: Python XGBoost Random Forest Scikit-learn Pandas Matplotlib</i> - Developed a supervised fraud classifier on bank account data; implemented full ML pipeline — EDA, feature engineering, cross-validation — achieving precision 0.94 and recall 0.89. - Applied threshold tuning to optimise precision-recall trade-off; produced a SHAP-based explainability report identifying top fraud risk drivers for stakeholder review.	
DataHunt Automated Web Scraping Pipeline	Completed
<i>Tech Stack: Python BeautifulSoup Selenium Pandas</i> Automated extraction of 1,000+ structured records from e-commerce and job portals; data-cleaning workflows produced analysis-ready CSVs, cutting manual collection time by ~70%.	
SalesPulse Interactive Business Dashboard	Completed
<i>Tech Stack: Excel Pivot Tables Power Query Slicers</i> Built a dynamic multi-KPI dashboard tracking revenue trends and regional sales; automated data refresh via Power Query, reducing manual reporting time by 60%.	
StoryData EDA & Visual Storytelling	In Progress
<i>Tech Stack: Python Plotly Seaborn Pandas</i> Developing narrative-driven EDA on a Kaggle dataset using animated Plotly charts, heatmaps, and distribution plots to communicate statistical insights to non-technical audiences.	
AskMyData AI Q&A; App with LLMs	In Progress
<i>Tech Stack: Python LangChain OpenAI API Streamlit</i> Building a GenAI app where users upload datasets and query in plain English; LangChain agents auto-generate Pandas/SQL analysis code using RAG and prompt engineering best practices.	

EDUCATION

Professional Certification in Data Science with Artificial Intelligence <u>Boston Institute of Analytics</u>	Jun 2026
B.E. Automobile Engineering CGPA: 7.25 VISTAS (Vels Institute of Science, Technology & Advanced Studies)	Sep 2021 – May 2024
Diploma in Automobile Engineering 72% Hindustan Institute of Engineering Technology	Jun 2016 – Jun 2019

VOLUNTEERING

Blood Donation · Hindu Mission Hospital (Mar 2023) & Sri Ramachandra Hospital (Jul 2024)
